

## *Covid-19 Behavioural Study Survey*

**A** National Institute for Health Research (NIHR) funded research project based at the University of Southampton is looking to recruit members of the public to take part in a large international survey on the preventative behaviours people are taking to avoid catching Covid-19 and the long-term effect on those that have suffered from Covid-19 during the pandemic.

To make our findings as meaningful as possible, we are hoping to get a broad range of participants from across the UK. The survey is aimed at everyone. The link to the UK-specific survey is: <https://pharma.unige.ch/limesurvey/index.php/326544?lang=en>

To make our findings as meaningful as possible, we are hoping to get a broad range of participants from across the UK. As such, local parish and town councils seem, to us at least, to be a good way to reach people that we wouldn't normally be able to reach. If you have a local community group (either online or in person) would you be willing to help up spread the word about our research?

Details about the project can be found [here](#) and we have social media posts that link to the survey set up for ease of sharing from our Facebook and Twitter accounts [here](#) and [here](#).
